

## Aim-17

### 17. Wireshark Report

=> "ip.src" command is used for the source filter

=> "ip.dst" is used for the destination filter.

=> In the packet list pane

Number (the number of the packet in capture file)

=> Time -> the time stamp of the packet

=> Source -> the address where this packet is coming from.

=> Destination -> the address where this packet is going.

=> protocol -> the protocol name in a short version.

=> length - the length of each packet

=> (ip.src == <sup>ip address</sup> x) and (ip.dst == <sup>ip address</sup> )

this filter gives the info which has only mentioned ip addresses.

=> ip.addr != ip address

=> this filter shows you all traffic except the traffic to or from the specified computer.   
 ~~NT~~ 11/9/2023

=> icmp -> this filter will show you only icmp traffic in the capture.
